

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

LISTING OF CLAIMS:

Claims 1-6 (canceled).

7. (new) A method of providing a plurality of services for using a telecommunications network, the method comprising:
- combining a plurality of basic services into at least one group of basic services; and
- activating the basic services of the group of basic services during a single transaction,
- wherein the basic services of the group of basic services can only be activated when all the basic services of the group of basic services can be activated.
8. (new) The method of claim 7, further comprising assigning a group identifier to each of the basic services of the group of basic services, a number of group identifiers assigned to each of the basic services corresponding to a number of groups of basic services to which each of the basic services belongs.
9. (new) The method of claim 8, further comprising a specification associated with each of the basic services, wherein the specification stores the group identifiers of the associated basic service.

10. (new) A method of providing a plurality of services for using a telecommunications network, the method comprising:

combining a plurality of basic services into a group of basic services; and

rendering the basic services of the group inactive when at least one of the basic services of the group of basic services becomes unavailable.

11. (new) The method of claim 10, further comprising maintaining at least one basic service of the group of basic services activated when the at least one of the basic services also belongs to another group of basic services, such that all the basic services that constitute the other group of basic services are activated.

12. (new) A server for providing a plurality of basic services for using a telecommunications network, wherein the basic services are combined into groups of basic services, the server comprising:

means for activating or deactivating the basic services of a group of basic services in a single transaction; and

means for activating the basic services of the group of basic services only when all the basic services of the group of basic services can be activated.

13. (new) A server for providing a plurality of basic services for using a telecommunications network, wherein the basic services are combined into groups of basic services, the server comprising:

means for deactivating the basic services of the group of basic services when at least one of the basic services in the group of basic services becomes unavailable.

14. (new) The server of claim 13, further comprising means for maintaining at least one of the basic services in the group of basic services activated when the at least one of the basic services also belongs to another group of basic services, such that all of the basic services that constitute the other group of basic services are activated.
